

Maintain your 401(k)...

*proper care of your retirement account
will get you there.*

Tips for maintaining your 401(k) account...

- ▶ At least once a year, **check your plan's investments** and your personal choices. You take your car in for regular maintenance, why not monitor your retirement savings like you do your car?
- ▶ Work with a financial advisor or your plan administrator to **learn more about running your account** efficiently. Financial advisors are the mechanics to your savings — they can help you diagnose problems and teach you preventive measures.
- ▶ Make sure your savings gauge won't land on empty in the future. Take the necessary steps to top off any savings gaps so **you will have the money you need** to reach your retirement destination.

401(k) Day
Taking you there
